

RPG 4700 Inline Mode Wiring Schematic

LEGEND

	Copper core low impedance ignition cables
	Resistive radio suppression ignition cables
	Copper wire to +12V of negative grounded battery
	Chassis ground

NOTES

In this setup the plasma spark has to jump across 2 spark gaps in series (one in the distributor, and one at the spark plug tip) thus dissipating some of its energy at the distributor.

For maximum plasma energy delivery to the spark plug Bypass Mode Install is recommended.
